**EDITORIAL NOTE:
INTRODUCTION TO SCIENTIFIC ABSTRACTS, SNR 2002**

The most recent and exciting scientific information is often presented at conferences long before it makes its way through the peer review process into print. As a compromise between timeliness and thorough review, we once again print the abstracts of scientific papers presented at the annual conference of the Society for Neuronal Regulation.

In full form these papers were presented in twenty-, forty- and sixty-minute time slots, and contained much more detail than their abstracts would indicate. Although the abstracts presented in this special issue of the *Journal of Neurotherapy* have not undergone the rigorous peer review process the *Journal* routinely applies to scientific papers, nevertheless they are reviewed carefully.

The papers presented at the SNR conference are first reviewed by the conference committee headed by Jay Gunkelman, and including Joe Horvat, Roger deBeus, Brian Thiel, Ann Marie Horvat, and Darlene Nelson. These papers are screened for accuracy and standards of scientific reporting by the committee. Tim Tinius further reviewed papers that were submitted by students. I then screened all papers for content and accuracy.

Authors who prepare their work for presentation at the conference are often summarizing their most recent research. It is hoped these presenters will develop their topics into full manuscripts, submitted to the rigors of peer review in this or other journals.
